

First Again!

Solutions House have installed the Extricom Beta Firmware version 4.4 which gives a number of new features at Stoke Park School & Community Technology College.

Stoke Park is the first site in the UK to run this firmware and is officially now part of the Extricom Beta Program. There are only 2 other sites running this code which are both in the US.

These new features include: -

- . Load Balancing of Access Points
- . The Ability to Name Access Points
- . The Ability to Turn Off individual radios per Access Point

Solutions House implemented for Stoke Park a Guest Portal using RADIUS. The new firmware now allows the school to turn off this Guest Access in areas where it is not required and confine it to public areas only (ie Maths will be disabled from Guest Access).
